

# SEALUX HD9 - Housing for Sony HDR-HC9E

The new generation of **SEALUX** housings for Sony HD Camcorders.

The direct view at the swung out monitor with 15° inclination to the swimming position, operation of all important functions directly from the handle are the most important features of this housing. One housing for both camcorders.

**Housing:** made of seawater proof aluminium, milled of monoblock CNC, hard-anodised and specially seawater proof sealed. The camcorder is fixed directly on the tripod plate in the front part.

**Monitor pane:** of optical glass, inclined by 15° to the swimming position, with optimal sunshield. A correction lens enables the optimal view at the monitor also with minimal eye distance. The monitor is optimally protected against outside light. Enjoy your records already while producing.

**Lockings:** two quick-action closures with safety lockings against unintentional opening.

**Change port system:** with bayonet and locking, enables fast changing of flat port, wide-angle ancillary lens or fisheye.

**Flat port:** of optical glass with changing bayonet, safety and cover.

**Close-up lens:** everytime swivelable also with the wide-angle ancillary lens. Therefore macro- and wide-angle picture taking is possible at any time.

**UW-Colour correcting filter:** when recording without light an URPRO-colour correcting filter for blue water can be swivelled in front.

**Microphone:** a high-quality electret-microphone records underwater sounds.

**Handle support:** with soft handles which are detachable for the transport.

### Push-button control:

The proven RX5 control via Remote-Lanc socket enables you to call up to ten functions by pushing the buttons. Due to the arrangement of the operating keys directly on the housing the handle support can be dismantled for transport. The ergonomic arrangement of the buttons allows good operation with gloves directly from the handle. No risk of blurring the picture.

### Comfortably programming on the LCD-touchscreen with installed camcorder.

#### Functions left

- Photo
- Manual focussing far
- Focussing near
- Autofocus ON/OFF
- Tape/Card changeover

#### Functions right

- Record
- Zoom-Tele
- Zoom-far
- Back-Light
- Power ON/OFF

### LED-control lights:

- red - Record
- green - camcorder ON
- green flashing - no cassette
- yellow - moisture indicator activated (if requested)

### Applicable accumulator:

NP-FH70 or smaller, changing of accumulators with installed camcorder is possible without problems.

### Special equipment:

#### Wide-angle ancillary lens:

with optical dome glass, coated, zoomable, with neoprene protection cover.

#### Fisheye:

super wide-angle optics with dome of optical glass, zoomable, with neoprene protection cover.

#### Monitor optics:

enlarges the picture and shortens the eye-distance to the monitor.

#### Moisture indicator:

acoustic, optical, controls the well-being of the camcorder.

#### Stabilising wing:

for fixing the **SEALUX** light systems.

#### Transport case:

the transport case with minimal weight of only 2.6 kg offers the storage of the complete video system with **SEALUX** light system. The transport case with the dimensions of only 500x390x190mm is allowed as hand luggage.

#### Further accessories see:

**SEALUX** accessories and light systems.

### Dimensions and weights:

- Housing:** Dimensions: L 193 mm with flat port x B 272 mm over keyboard x H 117 mm
- Weight:** 3350 g
- Tested depth:** 90 m
- Guarantee:** 2 years

**SEALUX – the easiest way to the best underwater photographs!**
